Remarkable Forbearance of a Mother, My friend, Mrs. Mitchell, and I were going out to pay some calls. On traching her house I found she was not yet ready, and went up stairs to her room at her invitation to wait there for her. As she was combing her hair I glunced out of the window and saw her young son climbing a tree and in a very precurious situation. I called Mrs. M. autention to this, and she put her head out of the window and shrieked: "Henry, get down out of that tree immediately. You will fall and break your limbs."

Her dutiful offspring looked at her as she stood there with head projecting beyond the casement, and then yelled back. "Put your head in that window, you old juke necked turkey beazard."

I listened to this in borrifled amazement, and waited to see what my friend would do about it, but, to my fur ther scandalization, she serenely went on combing her halr, and evidently was going to take no further notice of her son's rej inder. So I blorred out: "Why. Ellen Mitchell! Do you allow your children to talk to you in that manner?"

From facts relating to it, which are obsinable in this office, I am led to believe that it may occur at almost any period of gestation. What is to be done with the negro if

What is to be done with the negro if you pick the cotton by rachines? The answer is, better his coadit on. The first sawmill built in England, less than 125 years ago, was destroyed by a mob. Can any sane man believe that the laborer of today would be better off if all lumber was hand sawed? Arkwright's invention of the spinning jenny endangered his life, although it greatly benefited the laborer whose work it performed. It cheapened clothing, and increased the wages of the very laborers who mobbed lim, as soon as the temporary disturbance was quieted and their labor directed in new channels.

Where little or no machinery is used it requires all the laborer's wages to minister to his present wants, and te is illy clad and fed. The introduction of machinery snables him to be better hoased, clad and fed, and the introduction of the Lone Star Cotton Picker will mark in era in the progress of the negro race towards that higher civilization they are destined to reach. The evidences of that are now visible. A desire for education is almost universal, and a strong ceatrast to the "poor white trush," who seem to have little ambition.

The advent of the Cotton Picker will emancipate him from the duradgery of the cotton field, and his emancipators, the emandpate him from the drudgery of the cotton field, and his emancipators, the parties who furnish him the machines, will

cotton field, and his emancipators, the parties who furnish him the machines, will profit largely thereby.

The Standard Oil Company banished the tailow candie and furnished better light to millions of rural hories. No one will suspect them of doing so purely as philanthropists—"there was millions in it." There are more millions in furnishing Cotton Pickers. Any busin-se that can be absolutely controlled, and where a large demand exists, must be immensely profitable. In this respect the Lone Star Cotton Picker Company is pecularly happily situated. The rights of Angus Campbell, the inventor, are fully recognized, and he is the largest stockholder in the company.

The United States patent laws fully recognize the inventor's rights on monopoly of his invention, and jubtic sentiment endorsed them. Every legal formally has been complied with to sector the rights of the invention to his assignee—which is the Lone Star Cotton Picking Machine Co.

Monopolies making enormous profits are not considered bad by those on the "inside." You can be of the favored ones by purchasing stock nore, while you man get in on the ground floor. The nnes by purchasing stock now, while you can get in on the ground floor. The evidence is direct, positive and unimpeachable that the machine will save \$80,000,000 each year. Invitations to share it will not be extended long. Prompt action can alone secure it. Call at 31 Milk St., see the machine, and investigate.
